SUMMARY

I am a highly motivated computer science student from University of South Wales, aiming for a 2:1 and looking for a placement that enables me to develop my skills in artificial intelligence or technological advancements. I have had a few voluntary experiences in the tech sector, such as being an IT and Digital Marketing Manager at Sarum College, and most recently volunteering as a social media manager for Skade Gaming, a community for those on the autism spectrum. My career aim is to gain a role which allows me to further understand the technical side of things and to eventually move into using technology in digital or system administration.
